

Lighting Control Console

JL36/12

JL24/8

JANDS LIGHTING PRODUCTS have been introduced to meet the demand for a more sophisticated approach to the lighting of stage shows and other presentations. JANDS JL series control consoles have been designed to allow the operator maximum creative control of stage lighting.

The JL consoles are designed for touring use or permanent installation. They were developed as a result of several years experience in designing and building custom consoles for use in Jands own systems. Features such as the ADD-KILL and INSTANT OVERRIDE capability, found in no other commercially available console, were incorporated to make this board truly versatile in any application. The provision of scene masters, chase masters two independent presets and instant buttons allow the operator a higher degree of control than has ever before been possible.

JANDS JL console is available in two formats as a 24 channel, 2 preset, 8 scene board, or as a 36 channel, 2 preset, 12 scene board. All other functions and controls are common to both units. The chassis is constructed from sheet metal in deep black and has black bean wood end pieces. The front panel hinges upwards for ease of service. Additionally there is a padded arm rest which also opens to reveal a storage area for desk lights, marking pens, and notes.

Jands Electronics, well known reputation for quality and reliability are carried on in this unit. The same high grade components and advanced production techniques as employed in Jands top of the line consoles are present in the JL series. Jands attention to detail is typified by the use of plug in connectors on all PC Boards, wave soldering and a 100 hour 'burn in' of all products.
